

Quality through Innovation

Fire Suppression Systems

Q Tec Fire Services is the only 'in house' vehicle fire suppression system manufacturer that is wholly Australian owned and operated. Q Tec fire systems are installed in Mining, Forestry, Transport and Construction vehicles all over the world. Mark Ivanovic, the founder of the company, has built a strong reputation for customer service and product knowledge that has been proven over and over again. His technical aptitude and constant commitment to product quality and innovation has kept Q Tec fire systems at the forefront of innovation for almost two decades.

Q Tec Fire suppression systems were the first to use stainless steel tubing in place of hydraulic hose and Q Tec continues to set the benchmarks for the fire industry and will do for the foreseeable future.

The latest innovation from Q Tec fire is the VDAS "Vehicle Detection Actuation Suppression" systems that are now available in four models. The most recent addition to the

already impressive range of products is the LPRM system that features a combination of ROP and LOP which offers the flexibility of retrofitting out dated pyro-wick systems.

- Loss of pressure
- Rise of pressure, with loss of pressure actuation
- Electric actuation
- Dual agent

Unlike other fire suppression companies, Q Tec Fire Products are 100% manufactured in Australia. We take pride in only using Australian raw materials. No shortcuts are taken in the manufacturing process, with stringent testing and Quality Assurance procedures to guarantee our products exceed market expectations.

Quality through Innovation

Exceeding market expectations

History

Q Tec Fire Services started trading as Q trading in January 1992. The company name changed in January 2007 to reflect the increased focus on the core business of manufacturing Australia's highest quality Fire Suppression Systems. Originally based in the Industrial hydraulics industry, company founder Mark Ivanovic built a strong reputation for customer service and product knowledge. His excellent technical aptitude and solidly based reputation resulted in the long term relationships that remain in place to this very day.

Innovation

The Vehicle Detection Actuation Suppression system "VDAS" is the latest innovation from Q TEC Fire, once again raising the Industry Benchmark for all other fire companies to follow. The VDAS system is a combination of LOP Detection with ROP actuation and is commonly used as a retrofit for out dated pyro-wick systems.

Quality

Originally supplying hydraulic components to existing fire suppression companies: it became obvious that the state of the art in this industry was based around inefficient screw-type hydraulic fittings and flexible hose. Q Trading created a paradigm shift in the Australian Fire suppression industry by implementing high quality stainless steel rigid piping, flared fittings and eventually manufacturing their own LOP and ROP valves, in Brisbane Australia.

A message from our founder

"Q Tec Fire is the only Australian owned vehicle fire suppression manufacturer. Our company's absolute focus has been and always will be, to deliver a high quality competitively price product"
