

Powered Reel

FIRE FIGHTING Upgradable Reels

QUIK CORP, the company who **first** introduced "remote controlled *retractable* powered hose reels" to the Fire Fighting world, proudly present the new range of innovative QUIK REEL™ upgradeable hose reels to suit every facet of the fire fighting industry.

Quik Reel Powered reels have been produced to take the hard work out of rewinding long lengths of hose, by providing a powerful and consistent retraction that greatly assists in hose retrieval. Built using the highest quality components, the unit provides a safe, effective and user-friendly rewind every time. The reel can also be retracted using manual handle if required.

The units also features the most complete guarding system found on any hose reel, ensuring they are one of the safest on the market. Reels are available in either Powder coated steel or Aluminium in any choice of colour to suit your vehicle.

As with all models in this series, this reel can be easily upgraded at any stage without having to purchase a complete new reel. The reel can be upgraded to either a self-guiding "Archimedes" or fully Remote Controlled retractable option if necessary.

All of the above ensures you will always have the best hose reel solution for your fire fighting needs, while still being able to be completely upgradable from one stage to the next.
